

## **Community rolling action plan (CoRAP) update covering years 2016, 2017 and 2018**

The CoRAP update for years 2016 – 2018 lists 138 substances for evaluation by the Member State Competent Authorities under the substance evaluation process of the REACH Regulation (EC) No 1907/2006 (Articles 44 to 48). The plan contains 54 newly allocated substances and 84 substances as already published in the previous CoRAP on 17 March 2015. The substances are distributed for evaluation in years 2016, 2017 and 2018 between 22 Member States. 39 substances are being evaluated in 2016 by 15 Member States. In 2017 and 2018 the current plan is to evaluate at least 50 and 49 substances, respectively. However, by the end of March 2017 this plan is going to be updated again and changes may be introduced for the substances in years 2017 and 2018 (Article 44(2) of the REACH Regulation). Also new substances may be added for those years.

The CoRAP update has been prepared in close cooperation with the Member States, taking into account the criteria for selection of substances<sup>1</sup>. A draft CoRAP was submitted on 15 October 2015 to the Member States for their opinion and the draft was also published on the ECHA website on 28 October 2015. ECHA published this CoRAP update on 22 March 2016 on the basis of the opinion of the Member State Committee (MSC) that was taken on 4 February 2016. Comparing to the draft CoRAP update for years 2016 – 2018 some of the substances in the adopted list have been withdrawn, some were postponed to be evaluated in a later year and one substance was newly added to be evaluated in 2016. The above mentioned changes were introduced based on the request of evaluating Member State and in agreement with the MSC.

### **Initial grounds for concern**

The plan contains substances for which there is a suspicion that their manufacture and/or use could pose risks to human health or the environment. Substance evaluation under REACH aims at clarifying such potential risks.

In the CoRAP update the grounds for the initial concern that triggered the selection of substances for evaluation are briefly described. Also, the concerns per substance are explained in more detail in the related justification documents available in the dynamic CoRAP table published on ECHA website. In many cases the initial concerns are related to PBT<sup>2</sup>-properties, suspected endocrine disruption, or carcinogenic, mutagenic and/or reprotoxic properties in combination with wide dispersive use or consumer uses. In general, the uses of these substances cover various areas and are not focussed on any particular industrial, professional or consumer uses. The indication of the initial grounds for concern does not limit the evaluation made by the Member States, since the Member States may also focus

---

<sup>1</sup> Selection criteria to prioritise substances for Substance Evaluation (2011 CoRAP selection criteria) [http://echa.europa.eu/doc/reach/evaluation/background\\_doc\\_criteria\\_ed\\_32\\_2011.pdf](http://echa.europa.eu/doc/reach/evaluation/background_doc_criteria_ed_32_2011.pdf)

<sup>2</sup> PBT: Persistent, Bioaccumulative and Toxic

their assessment into other concern areas they find relevant during the evaluation.

### **Interaction with Registrants**

In the CoRAP update the contact information of the evaluating Member State Competent Authority is provided for each substance to facilitate interaction of the registrants with the evaluating Member State. ECHA encourages the Member States and registrants to have dialogues in order to clarify any concerns related to the substances<sup>3</sup>. This applies to all substances on the CoRAP, but in particular, this is important for the substances to be evaluated in 2016.

### **Evaluation process**

The designated Member States have 12 months to evaluate substances specified for 2016 starting from the date of publication of this CoRAP update. Where necessary, the evaluating Member State will prepare a draft decision for requesting relevant further information to clarify the suspected risks. If the available information is sufficient to clarify the suspected risks, the evaluating Member State will prepare a conclusion document that will be published on ECHA website. Any draft decision for the substances listed in 2016 need to be submitted to ECHA by 22 March 2017. ECHA will forward any draft decision to the registrants for comments without undue delay. After having considered registrants comments, the evaluating Member State refers the draft decision for review by the other Member States and ECHA. If proposals for amendment are made, the draft decision is referred to MSC. In cases of unanimous agreement in MSC ECHA will take the final decision; otherwise the decision will be taken by the European Commission.

## **Community rolling action plan (CoRAP) update covering years 2016, 2017 and 2018**

This document contains the Community rolling action plan (CoRAP) update, a list of 138 substances which are scheduled to be evaluated in years 2016-2018. Furthermore, it contains the names of the evaluating Member States with contact details and the indication of the initial grounds for concern.

- The substance public name is used. In most of the cases it is the name disseminated from the registration of the substance on the ECHA website.
- When the EC Number is not available, the number assigned to substances by ECHA after the inquiry process is used.
- When the substances are included in the CoRAP, they have not yet been evaluated and thus the initial grounds for concern are indicative and not exhaustive or conclusive.
- The initial grounds for concern indicated in the CoRAP are described further in the substance related justification document.

### Legend:

- Suspected PBT/vPvB: Potentially Persistent, Bioaccumulative and Toxic/very Persistent and very Bioaccumulative.
- CMR: generic term for known carcinogenic (C) and/or mutagenic (M) and/or reprotoxic (R) properties (according to CLP harmonised or registrant self-classification or CLP Inventory). The concern can refer to C, M, R or a combination of those.
- Suspected CMR: generic term for suspected carcinogenic and/or mutagenic and/or reprotoxic properties (not classified according to CLP harmonised or registrant self-classification). The concern can refer to (suspected) C, M, R or a combination of those.
- Sensitiser: generic term for known sensitising properties (according to CLP harmonised or registrant self-classification or CLP Inventory).
- Suspected sensitiser: generic term for suspected sensitising properties (not classified according to CLP harmonised or registrant self-classification).
- RCR: Risk Characterisation Ratio.
