Adopting and implementing the Roadmap products.
*Report from Working Session 2*

ENES9
5-6 November 2015
Sheraton Airport Hotel, Brussels

Objective

To identify potential barriers and discuss the strategies to overcome them, including cascading the Roadmap's benefits and added-value.

1. What is the current level of <u>implementation</u> Roadmap products? Current <u>roll-out</u> plans?
2. What and where are the <u>hurdles</u>?
3. What is identified as a <u>(business)</u> <u>gain</u>?
4. What needs to be <u>implemented 'urgently'</u>, or what would be a logical <u>order/timing</u>?
5. What can the <u>different stakeholders</u> do <u>to guarantee uptake?</u>
   Companies, industry associations, Member States, enforcement authorities, the Commission, service providers, the press and ECHA`

ECHA
EUROPEAN CHEMICALS AGENCY

Action 3.1

Registrants

Produce a Chemical Safety Report

ECHA and Member States
Use information for:
- Screening
- SVHC identification
- Further Regulatory Risk Management
- Dissemination

SCED
Action 2.5

SpERC Factsheets
Action 2.4

Sector use maps
Actions 2.1, 2.7

SWED
Worker exposure assessment inputs
Action 2.3

Relevant and processable information on conditions of use

Exchange Network on Exposure Scenarios
ENES
Chemical safety report/Exposure scenario
Roadmap

Downstream users

ES restructured short titles
Action 4.2

eGuide on eSDS

ESCom
Action 3.3

Facilitating the harmonisation and communication of conditions of use in exposure scenarios

Practical Guides and Case Studies
Actions 4.3, 4.5

Exposure scenario examples
Actions 1.2, 4.2

Formulators

End users

Mixtures: LCID method
Action 4.4A

Mixtures: SUMI
Action 4.4B

Outcome: From theory to practice

- For the system to work, information must be available in a harmonised manner and its is used.

- Priority = sector use maps for 2018 Registrations as a starting point for the 'machine' to start running.

Considerations

- Tools are available. Use maps formats frozen end 2015.

- DUs, the earlier you fill in your use maps the more confidence you get good info back.

- Need "first adopters" across a number of supply chains for different products to generate case(s) and show added-value (risk of 'wait and see'!!).

- Registrants, use maps "frozen" in content for 2018 registrations but recognise it may be revised afterwards.

- After 2018, have your (IT) systems ready to implement ESCom; start IT business plan now.

- Prepare implementation plan for various products.

Considerations

- Need for training and focussed promotion of the products to implement

- Realisation with authorities of level of implementation that can be realistically achieved at this moment in time

- Enforcement is needed, but should be in awareness of this state of play (see above)

Business case

- How to convince our management that REACH is not over after 2018?

- Efficiency.

- Staying out of regulatory "trouble"
  - priority SEv or SVHC
  - Enforcement

- Show added-value of the products

- Selling product stewardship.

- Roadmap coordination group is invited to elaborate further on this feedback

- We should <u>all</u> start to communicate with our management about work that needs to be done..!
