News Alert: ECHA/PR/08/20

Helsinki, 22 July 2008

REACH-IT BULK PRE-REGISTRATION FUNCTIONALITY NOW AVAILABLE

The bulk pre-registration functionality is now available in REACH-IT. It allows companies to submit pre-registration files for substances listed in EINECS. Companies may take preparatory steps outside the REACH-IT system and submit the files in an XML format specified by ECHA. Full compliance with the specified format is essential for all submitted bulk files to ensure their correct processing in the REACH-IT system.

The new functionality was launched today and it will allow companies pre-registering substances to submit a file covering up to 500 substances listed in EINECS (**Note:** for substances not in EINECS the REACH-IT online pre-registration must be used). The upper limit of 500 is to allow efficient processing of the submitted files in the REACH-IT system. It will also keep the files easy to manage for the companies submitting them.

Companies carrying out pre-registrations can submit several files by using the bulk submission functionality. Practical guidance how to submit a bulk pre-registration is available in the new "Data Submission Manual 6: Submission of Bulk Pre-registrations". The manual can be accessed via the link below.
