

## Resources related to alternatives to CrVI plating in Belgium

In July 2015, a workshop was organized in Belgium (*in French*) about alternatives to CrVI plating. It was organized by the center of metallurgic research (CRM), the University of Namur and Materia Nova: « *La substitution du procédé actuel de chromage dur: les alternatives en galvanoplastie et dépôts sous vide* » (2 July 2015 – Liège)

The project 'SUREMAT' (*Traitements de Surface et REvêtements actifs multi-MAtériaux*) received funding from the Walloon region in 2013

Conclusion of the workshop: alternatives are existing. The center of metallurgic research (CRM, <http://www.crmgroup.be/>) can advise SMEs about alternatives.
