

What to expect today

Biocides Day

29 October 2019

Peter van der Zandt
European Chemicals Agency

Already the seventh Biocides Day - first one for me

Today's topics - according to your wishes

1. How to assess **endocrine disrupting** properties
2. What Member States, ECHA and Commission are doing to revitalise the **Review Programme**
3. How to apply the new framework for a biocidal **product family**

Review programme

- **Delays** prevent us from achieving the expected high level of safety for human health and the environment – many active substances and products remain on the market unassessed
- **Level playing field** not yet achieved, as companies' situations vary depending on the status of their active substance in the Review Programme
- Working on an **action plan** together with Member States and the Commission

Endocrine disruptors

- Assessing ED properties requires time and **resources**
- Outcome of the assessment has important **consequences**
 - Can restrict or prevent marketing of products
 - Can require reformulation when this relates to co-formulants

Biocidal product families

- **Revised framework** for biocidal product families has been agreed this year to facilitate the establishment and the assessment of product families
- Will guide you in organising your product portfolio
- May impact costs

Networking and one-to-one sessions

- Visit the **IUCLID** and **EUSES** stands next door
- You have booked **20** one-to-one sessions with us today
- Use also the opportunity to discuss during the breaks and at the end of the day

**I look forward to
working with you
on biocides**

Thank you
