## Substances of concern in products

### 1. Advice on oversized SCIP dossiers

#### SCIP notification statistics

One month after the legal duty entered into force, ECHA has already received 6.6 million notifications from around 3 000 legal entities. After the deadline rush, we now see a steady flow of incoming notifications. We invite companies that have not yet started to follow the example of these frontrunners!

Cumulative No of notifications on 17 February 2021: 6,692,923

### **Dossiers with more than 1 000 components**

For dossiers containing more than 1 000 components, [as communicated earlier](#), ECHA has set limits to ensure optimised processing and usability of the data for the waste operators and consumers in order to allow safe use of the articles that have been notified.

All the notifications that have already been submitted with more than 1 000 components are currently in a "pending" status (a very limited number of submissions) and will not be further processed. To solve the issue and successfully finalise the notification, we would request that you re-submit the information and take into account the recommendations in the user manual "[Requirements for SCIP Notifications](#)" and the "[Key tips for successful SCIP notifications](#)" to simplify your dossier.

If you use system-to-system (S2S) submission, you should also align your IT systems with the requirements set out in the user manual and key tips.

### **Updated support material**

The main SCIP user manual "Requirements for SCIP notifications" will be available in 23 official EU languages in the coming days.

Updated system-to-system (S2S) service support material will be available next week to provide recommendations and best practice for successful S2S integration.

### **[SCIP support](#)**

#### **SCIP Dissemination Portal release date delayed**

Due to unforeseen issues in deploying technology for ECHA's website on which the SCIP Dissemination Portal will also run, the release originally foreseen for the end of February will be delayed.

We are committed to providing greater transparency on the presence of hazardous substances in products and will communicate a new release date as soon as possible.

With kind regards,  
the SCIP team
