Comment received				
Acute data on NPEn (n = ≤ 11 to ≤ 30 ethoxylate groups) is available only for NPE-12 (algae) and NPE-30 (fish), with the (E)LC50 values > 1 mg/L. Chronic data are only available for NPE-12 (algae) with a NOEC of 20 mg/L. Therefore, for this group no acute and chronic classification is possible according the available data.				
France support the conclusion that at this time a classification for NPEn (n = ≤ 11 to ≤ 30 ethoxylate groups) is not possible due to limited data.
