

Justification for removing a substance from CoRAP prior to evaluation

Substance Name (public name): Amines, C12-14 (even numbered)-alkyldimethyl, N-oxides

EC Number: 931-292-6

CAS Number: 308062-28-4

Authority: Ireland

Date: 22/03/2022

The priority for evaluating the substance has been reconsidered based on:

| | |
|--------------------------|--|
| <input type="checkbox"/> | The initial hazard ground of concern has been verified and considered of low priority |
| | |

| | |
|--------------------------|---|
| <input type="checkbox"/> | The initial exposure/risk ground of concern has been verified and considered of low priority |
| | |

| | |
|-------------------------------------|--|
| <input checked="" type="checkbox"/> | The generation of information under Substance Evaluation is considered of low priority because |
| | <p><input checked="" type="checkbox"/> Already ongoing or implemented regulatory process(es)</p> <p>A compliance check was conducted by ECHA prior to the proposed substance evaluation for amines, C12-14 (even numbered)-alkyldimethyl, N-oxides. ECHA issued a compliance check decision in July 2017 requesting a pre-natal developmental toxicity study (OECD TG 414) in a second species and an extended one-generation reproductive toxicity study (OECD TG 443). The IE CA considers that the information provided in response to this compliance check decision addresses the initial concern for reproductive toxicity identified in the CoRAP justification document. In addition, the IE CA reviewed the available repeated dose toxicity studies and considers that the available data clarifies the initial concern for effects in the eyes also identified in the CoRAP justification document. Therefore, it is concluded that substance evaluation is no longer required.</p> <p>The substance is considered low priority for further regulatory action at this time.</p> |
