

LATVIJAS VIDES, ĢEOLOĢIJAS
UN METEOROLOĢIJAS CENTRS

Justification for removing a substance from CoRAP prior to evaluation

Substance Name (public name):	Dinitrogen tetroxide
EC Number:	234-126-4
CAS Number:	10544-72-6
Authority:	Latvian Environment, Geology and Meteorology Centre
Date:	19/03/2019

The priority for evaluating the substance has been reconsidered based on:

<input checked="" type="checkbox"/>	The initial hazard ground of concern has been verified and considered of low priority
<p>The initial ground of concern: Exposure of workers, High RCR, Suspected Mutagenic, Suspected Reprotoxic.</p> <p>The requests concerning reprotoxicity (PNDT and EOGRTS) were withdrawn as MSC considered that there was enough information to conclude on the respective hazards. As consequence, it seems that there is no hazard trigger for reprotox nor for mutagenicity left.</p> <p>This leads to the situation that there is no concern to be clarified anymore for the substance and it can be removed from CoRAP.</p>	

<input type="checkbox"/>	The initial exposure/risk ground of concern has been verified and considered of low priority
<ul style="list-style-type: none"> • <i>Indicate the initial hazard ground of concern (e.g. suspected CMR, ED, PBT, as presented in chapter 5.3 of the CoRAP justification document)</i> • <i>Provide the reasons for reconsidering their relevance.</i> 	

<input type="checkbox"/>	The generation of information under Substance Evaluation is considered of low priority because
	<input type="checkbox"/> Already ongoing or implemented regulatory risk management process(es) <i>Specify which process(es) and explain, e.g. compliance check, substance evaluation for a larger group, restriction, SVHC identification, others</i>
	<input type="checkbox"/> Registrants' (voluntary) action addresses concern <i>Specify</i>
	<input type="checkbox"/> Other: <i>Specify</i>
