CHEMICALS OFFICE OF THE REPUBLIC OF SLOVENIA

## Justification for removing a substance from CoRAP prior to evaluation

**Substance Name (public name):** 3-methyl-1,5-pentanediyI diacrylate

**EC Number:** 264-727-7

**CAS Number:** 64194-22-5

**Authority:** Chemical Office of the Republic of Slovenia

**Date:** 18/03/2020

**The priority for evaluating the substance has been reconsidered based on:**

<input type="checkbox"/>	<b>The initial hazard ground of concern has been verified and considered of low priority</b>

<input type="checkbox"/>	<b>The initial exposure/risk ground of concern has been verified and considered of low priority</b>
Not applicable.	

<input checked="" type="checkbox"/>	<b>The generation of information under Substance Evaluation is considered of low priority because</b>
	<input type="checkbox"/> Already ongoing or implemented regulatory risk management process(es)
	<input type="checkbox"/> Registrants' (voluntary) action addresses concern
	<input checked="" type="checkbox"/> Other: The hazard finding relies on structural similar substances. ECHA identified a group of around 300 acrylates in its database which also includes 3-methyl-1,5-pentanediy diacrylate. ECHA is going to create a sub-groups in order to get a better picture on the whole set of acrylates. Therefore and for the time being, we consider substance evaluation not as the route to address the concern.
